### **BedRock Software Named *Aggregates Manager's* 2009 Top 25 Rollouts**

Des Plaines, Illinois, December 1, 2009 – BedRock Software LLC has been selected as one of the top 25 Rollouts for 2009 by *Aggregates Manager* Magazine. BedRock was cited for innovation in the automation category for delivery of Mobile Equipment Simulations.

#### **About *Aggregates Manager's* Top Rollouts of the Year:**

Hundreds of products are introduced to the aggregates market each year, but only a limited few actually change how producers run their operation. Each year, our staff highlights the top, innovative products introduced to the market. *Aggregates Manager* covers hundreds of products each year in its Rollouts departments and Supply Lines features. So each year, our staff reviews all the product introductions we've covered for the past year to pick out 25 that we believe are worth further review. Our priorities are new concept products, new series/ new generation products in categories that relate to the aggregates industry, and other rollouts which serve our readers' interests by increasing competition in a product category.

In June, 2009 BedRock provided an industry first by releasing AggFlow *with* Track-Mounted (mobile) equipment simulation capability. "We are honored by *Aggregates Manager's* accolades and we are even more excited to deliver this new and innovative capability to our global user base" said Robert Teller, Director of Distribution for BedRock.

AggFlow is used by aggregate producers, equipment manufacturers and dealers around the globe to simulate aggregate and mining operations. Users can simulate and calculate mass aggregate and water balances flowing through a plant. Thus optimizing and maximizing production of desired products. AggFlow simulations help improve profitability by identifying inefficiencies and bottlenecks; by accurately assessing the impact of proposed changes or new equipment before they are made; and by reducing plant down-time and production errors. The program, available in English, Spanish and French versions, is extremely popular because it is accurate & easy to use.

**BedRock Software, LLC** has been providing the AggFlow program to the global aggregate industry since 1993. AggFlow, the first fully independent simulation program, is recognized as the global standard plant flow analysis tool.
